Vsevolod Rudakov

Staff SDET | Test Automation Architect | AI Agents & QA Automation
| CI/CD & DevOps | API & Mobile Testing (Python, pytest, Robot
Framework, Java, Docker, AWS) | MS in CS

San Francisco Bay Area

Summary

I'm an experienced SDET with over 9 years in designing, building, and leading automation solutions for web, mobile, and API platforms. My work bridges QA, DevOps, and development, helping teams ship faster and with confidence by making test automation a core part of the delivery pipeline. I specialize in: Test automation architecture (Python, pytest, Robot Framework, Java, Selenium, Playwright, Cypress, Appium) for scalable, maintainable frameworks CI/CD pipeline integration with Jenkins, Docker, GitHub Actions, and AWS API and backend testing for complex enterprise systems Mobile testing (iOS & Android) with Appium Team leadership and mentorship, guiding engineers in best practices for automation, test strategy, and DevOps adoption AI-assisted testing with Claude and Codex for test case generation, failure analysis, and code review Across my career, I've driven measurable results, like cutting regression testing time by around 70%, improving test coverage by 50%, and reducing release risk by embedding automation into CI/CD pipelines.

Experience

Abbott

Staff SDET

May 2023 - Present (3 years 4 months)

Alameda, CA

Architect and maintain automation frameworks for API and mobile testing, supporting SDKs and healthcare platforms.

Perform end-to-end, integration testing, including system integration, unit testing, contract validation, and data-driven API testing (Java/Junit, Python/Pytest/Robot, C++/GTest)

Partner with DevOps to integrate automated tests into CI/CD pipelines using Jenkins, Docker enabling faster releases with fewer defects.

Mentor and lead junior engineers, conducting code reviews and improving framework design.

Create detailed test strategies, validation plans, and reporting to ensure regulatory and quality compliance.

Optimized regression execution, cutting overall testing time by 40% while increasing stability and coverage.

Evernote

Senior SDET

June 2021 - March 2023 (1 year 10 months)

Designed and built automated test suites for web, API, and mobile platforms (Java, Selenium, Appium), improving coverage by 50%.

Embedded automation into CI/CD pipelines, reducing regression execution time by 60%.

Collaborated closely with development teams to identify high-impact test cases for automation, accelerating feedback loops.

Conducted code reviews and improved framework scalability to handle rapid product growth.

Championed quality practices in Agile sprints, helping the team release with confidence.

insightsoftware

Senior QA Automation Engineer

October 2018 - June 2021 (2 years 9 months)

San Mateo

Built scalable UI/API automation frameworks, integrating Selenium Grid with Docker and Jenkins to support global development teams.

Automated smoke and regression testing in CI pipelines, accelerating deployments.

Led cross-functional QA initiatives, mentoring engineers on automation and process optimization

Castlight Health

Software Engineer, Tools and Automation

May 2017 - August 2018 (1 year 4 months)

Sunnyvale

Developed and maintained automation test suites for web UI and API testing (Capybara, Cucumber, Ruby, RSpec, Selenium).

Automated end-to-end, regression, and smoke testing, improving product reliability and reducing manual effort

Education

Volga State University of Telecommunications and Informatics

Master's degree, Computer Science
