Joe Chavis

Senior QA Automation Test Engineer with AI and RAG experience
Dallas, Texas, United States

Summary

Senior QA Automation Engineer specializing in scalable automation frameworks for mobile, API, and enterprise SaaS platforms. Proven record of reducing regression cycles, increasing test coverage, and integrating automation into CI/CD pipelines. Experienced in C#, Java, Appium, Selenium, SQL validation, and Azure DevOps. Recognized for mentorship, cross-team collaboration, and AI-assisted test development.

Experience

MVP Health Care
Senior QA Engineer
December 2024 - Present (1 year 8 months)
Dallas, TX

- Creating and maintaining a mobile automation framework using C#, Appium, and Microsoft Copilot AI, enabling faster test development and higher-quality releases.
- Building scalable automated test suites for Android and iOS applications and integrating them into CI/CD pipelines for continuous, reliable execution.
- Performing manual and exploratory testing on the MVP Health Care insurance mobile app across physical devices, Browser Stack, and Azure DevOps environments.
- Using SQL databases to validate backend data, support data-driven test scenarios, and ensure accuracy across systems.
- Managing test cases, defects, and user stories in Azure DevOps, ensuring alignment and traceability throughout the SDLC.
- Supporting and mentoring QA team members with automation best practices, mobile-testing strategies, and workload assistance as needed.
- Collaborating closely with cross-functional teams and actively participating in all Scrum ceremonies, providing updates on test progress, risks, and overall product quality.

SoftPro

Senior QA Engineer

March 2024 - June 2024 (4 months)

Dallas, Texas, United States

- Support the “Live” escrow closing application project by providing QA test code development, bug tracking, and raising defects
- Write automation tests using C# and gRPC protocol to confirm correct request / response database communication
- Collaborate with development on issues found in the QA process and in the integration pipeline

RealPage, Inc.

QA Engineer

September 2023 - March 2024 (7 months)

Dallas, Texas, United States

- Support residential property database SaaS on both front and back end in accounts receivable
- Test and confirm that issues found in development are corrected and documented using Azure and other bug tracking
- Work with developers to address and correct SQL database issues found while in QA testing using SQL Manager
- Support the API database automation test effort by creating new tests using Eclipse, Junit, Cucumber, and Karate.

Boeing

QA Automation Engineer

April 2022 - July 2023 (1 year 4 months)

Dallas, Texas, United States

- Provided automated testing and software verification solutions for the Boeing MQ-25 Stingray Unmanned Aerial Vehicle
- Identified and corrected issues involving automation test cases structures using SpecFlow with C# and Visual Studio
 - o Contributed to team success through quick test case turn around and assisting other team members
- Created and maintained metrics, new test cases, and specific solutions involving the test code base
- Maintained workflow and participated in code reviews using Jira, Bitbucket, and Git technology
- Created, modified, and corrected automated test scripts using C#, Git, and Visual Studio to test in-house aerial vehicle simulation software for verification on proprietary testing environments

Dialexa

Quality Engineer

June 2021 - January 2022 (8 months)

Dallas, Texas, United States

- Facilitate scrum ceremonies where needed involving multiple teams
- Took ownership of daily scrum and agile duties to allow a team to be more productive
- Teams were more efficient and structured after ceremonies were in place
- Created discussions and plans for quarterly “super-scrum” de-briefings that allowed the team to air it’s thoughts on current project status
- Ensure high quality of product by researching, testing, and collaborative communication between internal teams and clients
- Assist in code and framework testing using Appium and Cypress for web portal and Mobile applications
- Streamlined testing efforts for regression, integration, and User Acceptance Testing
- Familiarize and use tools such as Docker, Confluence, JIRA, XCUI Test, and XCode

Service Autopilot

Selenium Architect

March 2016 - June 2021 (5 years 4 months)

Richardson, Texas

- Build from scratch Selenium frameworks using Java and C# to support the QA team for Go Live Releases
- Significantly decreased amount of time required to retest legacy features
- New Go Live testing schemes allow for more coverage of newer feature functionality
- Create new automated testing scenarios to support ever changing and new features
- Successfully streamlined pre-release testing by developing a team level scheme to cover multiple sub-domains simultaneously
- Collaborate with Development team on issues found during software testing and respond accordingly
- Create tickets to keep track of defects found in testing using Jira
- Assist in mobile testing effort using Appium, Eclipse, and Java to write functionality tests for the mobile platform

American Heart Association | American Stroke Association
Software QA Engineer

May 2015 - February 2016 (10 months)

- Quality testing of AHA corporate health index web application against web and mobile technologies
- Achieved maximum web app exposure by utilizing multiple devices and testing techniques
- Create and modify UAT scenarios and requirements related to project goals
- Defect tracking of issues to and from software development group
- Test case generation and maintenance
- Collaborate with team members and development teams overseas or otherwise in different time zones

GENCO

Software QA Engineer

November 2014 - March 2015 (5 months)

Ft. Worth, Texas

- Quality testing of proprietary production software involving smartphone readiness / initiation to market or redistribution for resale.
- Kept production acceptance levels by learning and completing new tasks when other employees are out of office.
- Create content and data injection scenarios for smartphone forensics lab.
- Decreased work load by implementing technologies to speed up repetitive tasks.
- Defect tracking of issues to and from software development group.
- Smartphone system image setup and modification for software testing.
- Test case generation and maintenance.
- Mobile device testing using Android, iOS, and Windows platforms.

Trident Micro Systems

Quality Test Engineer

January 2009 - April 2014 (5 years 4 months)

Arden, North Carolina

- Led QA side-project in testing software solution for wireless communication to telephone over IP network:
- Offered key efficiency modifications for a new technology in the radio industry.
- Saved company time by re-coordinating test efforts daily to account for changes in project requirements.
- Created an automation lab to increase efficiency of manual testing of system control computers.

- Applied test methodologies such as Regression, User Acceptance, Performance, White Box, and Black Box to daily activities.
- Integrated use of mobile technology in user acceptance testing and web applications.
- Used defect tracking system to keep track of issues and communicate reproduction steps to developers.
- Increased understanding and speed of resolution of issues by personally meeting with developers
- Implemented new manual testing patterns and solutions for a previously undocumented scheme
- Introduced higher caliber and quality standards to the main project
- Prepared official reports for review by project management in a major project environment.
- Designed and implemented test plan documents and related templates for use by test personnel.
- Contributed to overall project schedule adherence by saving time in the test department.
- Communicated with partner companies and customers to resolve hardware or software issues regarding live products.
- Participated in customer facing Beta test of final product by assisting with setup, test, and communication of wireless system directly with customer.
- Raised customer confidence of final product due to extensive knowledge of product, and system setup.

Anvil Knitwear

2 years 7 months

Material Handler

April 2005 - July 2007 (2 years 4 months)

Swannanoa, North Carolina

- Insured finished material goods are handled and packaged properly for transfer to shipping department.
- Took QA samples of final product and confirmed QA initial inspection pass.
- Use computer tracking system to track final product and issue a unit number for tracking to destination facility.
- Cross trained on multiple jobs to allow continuous production run while other employees were away from their stations.

Electronics Technician

January 2005 - April 2005 (4 months)

Swannanoa

- Repaired or replaced broken parts on knitting machines to insure continuous production
- Worked with engineering management to issue new solutions for preventative maintenance on high use industrial level machinery.
- Performed preventative maintenance on high use industrial level machinery.
- Communicated with 3rd party companies to order new machine parts or new machines entirely.

Radisson

Customer Service Representative

June 2004 - December 2004 (7 months)

Ft. Worth, Texas

- Assumed responsibility for courteous service in a high fidelity hospitality and retail setting.
- Provided general customer service at the bar area for restaurant and hotel customers alike.
- Took orders for room service staff and related messages to the kitchen.
- Acted as a minor concierge for customers and local attraction vendors.
- Verified beverage inventory and adjusted ordering schedule when needed.

DeVry University

Faculty Assistant

October 2000 - October 2003 (3 years 1 month)

Irving, Texas

- Provided tutoring for fellow students in various academic studies.
- Assisted professors during classes both in the lab and general classrooms.
- Scheduled meetings between support staff and students for academic services.

Education

DeVry University

Bachelors, Electronics Engineering Technology · (2000 - 2003)
